

PLUMETT SNAKE-EYE™

The world's first robot for the expansion of the fibre-optic network (FTTH)

Generates significant savings
Increases capacity of the existing network in the cities

Main advantages of Plumett-Snake-Eye:

- Over 50% fewer construction holes on streets and pavements
- Less construction work means buildings are connected more quickly
- Less pollution caused by noise, dust and building work for the population
- Optical fibres can be effectively laid in existing pipe systems

The snake-Eye permits, through the articulated head with an integrated camera and lighting, to find a passage in an occupied duct to install an additional cable.

Multi-segment head with camera

Mono-segment head with camera and hook

Control box with display and power leads

Snake 11-150 + reel with pusher

Snake 11-150 + reel without pusher
